Summary

Software Developer specializing in **Java** and **Spring Boot** backend development, with experience building APIs, authentication systems, and event-driven systems. Focused on writing clean, maintainable code and delivering reliable software that works end to end.

Technical Skills

Languages: Java, SQL, Python, JavaScript

Frameworks: Spring Boot, Spring Security, React.js

Tools: Postman, Docker, Git, IntelliJ IDEA, VS Code

Projects

RFP Tender Intelligence System | Java, Spring Boot, JWT & OAUTH2 ,PostgreSQL, React 2026

- Developed the backend using **Spring Boot** implementing secure document ingestion, user management, authentication and query processing services.
- Implemented tender analysis including document summarization, proposal generation, document Q&A, document comparison and risk assessment, and bid evaluation through REST APIs called by a React-based UI.
- Integrated bid win prediction and risk scoring using Random Forest into backend workflows, enabling data-driven tender evaluation and decision-making.

CloudBank – Microservices Banking System | Java, Spring Boot, Kafka, Keycloak, Docker 2025

- Developed a microservices-based banking system using **Spring Boot**, consisting of accounts, cards, loans, authentication, and API gateway services.
- Implemented event-driven communication using **Kafka**, alongside centralized authentication and authorization using **Keycloak**.
- Containerized services with **Docker** and tested them on **docker**, with monitoring through **Prometheus** and **Grafana**.

NoteVault – Notes Taking App | Spring Boot, Spring Security, React.js, JWT & OAUTH2 2025

- Developed a secure notes management application using **Spring Boot**, implementing authentication, authorization, and REST APIs for note management.
- Implemented CRUD operations for notes along with user settings management through a React-based UI with responsive and real-time user interactions.
- Implemented **Spring Security** with CORS and CSRF protection to secure application endpoints and user data.
- Integrated **JWT** authentication and **OAuth2** social login via Google and GitHub to provide secure access across application endpoints.

Education

Dronacharya College of Engineering (Gurugram University) Expected Aug 2027
B.Tech – Computer Science and Engineering — Current CGPA: 8.0 Gurugram, Haryana

Andhra Education Society Senior Secondary School 2021
Class XII – CBSE — Percentage: 92% Delhi, India

Achievements

- HackHatch Hackathon, IIIT Delhi – Top 10** Dec 2025
Project: BidWare – RFP Tender Risk Prediction System

Certifications

- Udemy** – Master Microservices with Spring Boot, Docker, Kubernetes
- Udemy** – Master Spring 6, Spring Boot 3, REST, JPA, Hibernate
- Udemy** – Spring Security 6 with React.js, OAuth2, JWT, Spring Boot
- Udemy** – Java Masterclass 2025: 130+ Hours of Expert Lessons
